

WAGU® Flap Valve, Circular Type

With lever and counterweight, for anchor bolting.

Structure Recesses

Mounting Instructions

- ⇒ Place Flap Valve at the determined position and align.
- ⇒ At the fastening flange, the bolt holes are marked.
- ⇒ You can use alternative holes if on drilling e.g. you come across a concrete reinforced iron.
- ⇒ The bolt holes in the flange are larger than the compound anchor bolt.
- ⇒ For fastening, compound anchor bolts with larger washers have to be used.

Sealing the fastening flange towards the wall

- ⇒ Prior to fastening the Flap Valve on the wall, the wall seal is applied on the back of the flange.
- ⇒ On request, we'll supply fastening parts and seal, too.
- ⇒ Within the area of the facings of the wall sealing, the concrete wall has to be even.
- ⇒ When screwing on the fastening nuts take care that the flange sits close to the concrete wall in a uniform manner. Distortion of the flange affects performance and tightness of the valve.
